**Jean-Pierre Pascault, Henry Sautereau, Jacques Verdu, Roberto J. J. Williams : Thermosetting Polymers (Plastics Engineering)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Thermosetting Polymers (Plastics Engineering):

Provides comprehensive coverage of the most recent developments in the theory of non-Archimedean pseudo-differential equations and its application to stochastics and mathematical physics--offering current methods of construction for stochastic processes in the field of p-adic numbers and related structures. Develops a new theory for parabolic equations over non-Archimedean fields in relation to Markov processes.

...useful...recommended to undergraduate and graduate students, as well as chemists and engineers. -Polymer News
